# 1 General Information

Pesticides are used for weed and vegetation control across north east Sydney.  
The pesticides used include:

- Lynx WG; and
- Round-up Bioactive Herbicide.

All pesticide spraying is programmed between the following days and times:

- Sunday to Thursday between 8pm and 5am.

Works will be rescheduled if:

- Rain is forecast within 24 hours of the proposed weed control activities; and
- Wind speed is likely to be above 15 km/per hour during proposed weed control activities.

**For further information, call the information line:  
1300 776 069**

## 1.1.1 Summary of Warnings

### **Round-up Bioactive Herbicide**

Do not contaminate dams, rivers or streams with the product or used containers. When controlling weeds in aquatic environments, refer to product label directions to minimise the impact of spray on aquatic environment.

### **Lynx WG**

Do not use chlorine bleach with ammonia. The mixing and application equipment must be cleaned of all traces of liquid fertiliser containing ammonia, ammonium nitrate or ammonium sulphate prior to adding chlorine bleach. Failure to do so will release a gas with a musty chlorine odour which can cause eye, nose, throat and lung irritation. Do not clean equipment in an enclosed area.

Do not contaminate streams, rivers or waterways with the chemical or used containers.

A nil withholding period is applicable for Lynx WG herbicide. It is recommended, however not to graze treated areas for 3 days post application to ensure product efficacy.
