# Asphalt surfacing services

## in Western Australia

### What we do

Our road surfacing business has been creating and delivering leading **solutions** for customers in Western Australia for more than 37 years, with services including:

- **Asphalt pavements**, including mix design, road re-seal applications, surface levelling, and road reconstruction
- **Spray sealing**, with total service capability including seal design, priming, and single and multi-layer seal coat application
- **Micro-surfacing**, delivering cost-effective road surfacing and shape improvement through on-site mixed cold-emulsion application
- **Bespoke surfacing**, including delivery and rehabilitation of motorsport and airport facilities.

### Our approach

We embrace innovation and **courageously set new benchmarks** in the delivery of our products, services and solutions to meet our customer's needs and road user's expectations.

We form partnerships with our customers to demonstrate new products and services, such as high recycled content in bituminous and asphalt products, and provide expert advice informed by our in-house research, development and asset management capabilities.

“We are continuously improving the performance of our road surfacing products and services, tailoring our solutions to our customer's unique challenges, and delivering safe, sustainable outcomes for the communities we work in.”
