

# Albany asphalt plant

## The south-west's local asphalt solution

With direct connections across the state's south-west, Downer's new Albany asphalt manufacturing facility supports our local customers through:

Processing control, providing high quality, consistent mix and reliability of supply

Production up to 80 tonnes per hour, capable of servicing significant asphalt projects across the Albany region

Flexible delivery, with ability to service night-shift and weekend asphalt surfacing activities

Supporting the local economy, using quarry materials from the local region, and creating secure, full-time employment positions

NATA-approved laboratory testing, with an on-site mobile laboratory available for larger projects

Negating requirement for costly, high-emissions haulage of asphalt from metropolitan manufacturers

Capability to manufacture mixes containing up to 20% recycled asphalt pavement (RAP)

Ability to customise asphalt mix designs to suit your unique project requirements, including oxides and warm mix additives

### Did you know?

Downer's Albany asphalt plant is the only local manufacturing facility approved to produce Main Roads Western Australia mixes, giving our customer's certainty in the compliance and performance of their road assets.
